

K-SOL NITROCAL GG GR

STIMULATES A VIGOROUS PLANT DEVELOPMENT PREVENTS AND TREATS CALCIUM DEFICIENCY INCREASES TISSUE MECHANICAL RESISTANCE

The K-SOL LINE consists of a wide range of highly soluble fertilizers with a large variety of macronutrients ratios, to best meet individual crop requirements and production expectations. The microelements, present in a totally chelated form, help prevent and treat any physiological plant disorder associated to their deficiency. The K-SOL LINE is suitable for any fertigation system.

K-SOL NITROCAL GG GR is a nitrogen mineral fertilizer of the K-SOL LINE, highly soluble in water, with ready effect. The nitrogen, available in nitric form, is easily absorbed by the root system. This allows a prompt recovery from deficiencies related to adverse climatic conditions or nutritional deficiencies, even during the most critical phases of the crop cycle. Calcium nitrate triggers a rapid plant vegetative response. It is ideal for applications at vegetative restart, pre-flowering and whenever the crop shows growth interruptions. K-SOL NITROCAL GG GR can be mixed with all other soluble fertilizers, with the exception of fertilizers containing phosphorus and sulfate.

CROP	TIME OF APPLICATION	DOSE/HECTARE*
All crops	Vegetative phase	25-50 kg

COMPOSITION	
Total nitrogen (N)	15.20%
Nitric nitrogen (N)	14.00%
Ammoniacal nitrogen (N)	1.20%
Calcium oxide (CaO) soluble in water	26.60%

PHYSICO-CHEMICAL FEATURES	
SOLUBLE POWDER	
pH (sol 1%)	6.30
Conductivity E.C. S/cm (1‰)	950
METHOD OF USE	
	Fertigation

PACKAGING: 25 KG - PALLET 1500 KG
