

MIKRO (NPK) B.T.C.

20-20-20 + ME

HIGH SOLUBILITY, LOW pH AND CONDUCTIVITY STIMULATES A BALANCED PLANT DEVELOPMENT

The MIKRO line is the new line of water-soluble microgranular fertilizers created by bringing together K-Adriatica's decades of experience in the field of fertilizer compaction and granulation with new technologies on the market.

The result of the activities of the R&D unit, the MIKRO line has improved the main chemical and physical parameters, such as shape, size, solubility and surface regularity, of water-soluble powder formulations.

By overcoming problems related to differences in the physical characteristics of the main raw materials, the new technology makes it possible to obtain a microgranule with a uniform composition, homogeneous in grain size, highly soluble and dust-free.
